School Re-opens. Drilling Artesian Wells.

The Bow Island public school re-opened on Tuesday with a good attendance of scholars. The principal, G.C. Peterson, has been re-engaged for the ensuing term, as has also his assistant, Miss Voale. Miss Smith of Lethbridge has taken over the charge of the infant school.

A new feature in connection with the large school is the formation of a girls' basketball team, which so far there are seven scholars. Probably there will be an addition of one or two from outside points to this grade.

The Cadet Corps, which has been such a prominent and conspicuous success during the past two years in connection with our schools, will, we understand, again require special attention.

With reference to this corps, a communication has been received from the Brigadier-General of Military District, No. 13, Calgary, addressed to the secretary of the School Board, in which the following appears:

"The report on the annual inspection of the Bow Island Cadet Corps has been placed before me. It is gratifying to note that fair progress has been made by the corps.

The high standing of the corps in first aid and musketry during the year is most satisfactory.

It is hoped that the coming year may show a continuation of the good work already inaugurated in your school."

Rains Delay the Cutting.

Last week-end the weather was extremely unfavorable for harvesting operations, the heavy rains and big winds making things unpleasant for everybody. Cutting had to be entirely suspended. Since Monday, however, the brighter skies and more sunshine has been a great improvement, and with the drying winds an earlier resumption of work in the harvest field was made than at first was thought possible.

The heavy rains of Sunday and Monday resulted in a large percentage of the grain being lodged. Nowhere, however, as far as the Review can hear, was there any serious damage done. In the majority of cases the loss occasioned consists chiefly in loss of time in cutting. Farmers are now again speeding up, and the expectations are that, unless more unfavorable weather intervenes, sixty per cent of the cutting will be finished in this district by the end of next week.

They Want our Potatoes.

(Calgary News-Telgram)
One of the city's business men, returning from the East, this week reported that the people of the Ottawa Valley were inquiring whether Alberta would have any potatoes to export this year. They remembered that the west sent potatoes to Ontario last year, and this year, they declare, the need is more pronounced and the market is better. Potatoes were selling at \$2.00 a bushel when he was in the federal capital, and, as there is no crop in the entire Ottawa Valley, importation is necessary. It struck him, therefore, that there might be a good market for the Alberta product. The Calgary News-Telgram passes the hint along to the United Farmers of Alberta and the Boards of Trade, with the suggestion that communication with the Ottawa Board of Trade be entered into with a view to building up a potato trade of a permanent character.

THE BOW ISLAND REVIEW.

W. P. COTTON, proprietor.

Notes by the Way

By "MINIMUS."

I was reading lately a book by a man named Chesterton. He is rather refreshing. Especially when he speaks of Progress. Progress interests us folks out in these new countries and we are always talking about it with a big P.

What does it mean anyhow? "Making better," "advancing," "getting on," mean nothing. What do you mean by "better"? And, if you are advancing, where the blazes are you advancing to?

"Progress" itself is just "hot air" unless you know what kind of progress you have in view. If it means making bigger, I understand you; if it means making cleaner, purer, smaller, fatter, you are intelligible to me. But you must have some ideal before you.

First, then, dissatisfaction with things as they are. Then, of necessity, a vision of things as they ought to be, a model in fact.

Then if we are dissatisfied with this we all "get on" and make it "progress" till it gets like the model we have imagined. So then the people who are going to improve this world are the people who have their attention on the next.

At any rate the New Jerusalem is a model, whether you like it or not. It is an ideal and in progressing we need an ideal to progress to. See?

Reform is really a better word. It means to re-shape. If a thing is in bad shape we push till we make it just that shape which we have in mind.

Where we are always making the greatest mistake, points out Chesterton, is right here. That whereas we ought, if progress means anything, to be always changing the world to suit the vision, we keep on changing the vision to fit the world. Whereas our efforts, (let us say), should be aimed at restoring honesty and faith, we gradually come to change around and around whether honesty and faith are, after all, so desirable.

Suppose, for instance, a man has the enthralling vision of a pink world. He sets to work to make it pink by all means. Let us suppose that after years of toil, rotting everything pink, he has at last reached Bow Island, and is putting the last coat (say) on the Anglican Church and then after reading a fresh philosopher, decides that after all yellow is a better ideal. You have to stick to the vision if you want to progress and not waste your time.

You can't progress if you are always changing your mind. If you are always changing your views you can be jolly well certain you will never change anything else. Certainly you will never effect any change in your environment.

A man who is an atheist one day, a Christian Scientist the next, and a Holy Roller the week after, will probably be an inmate of Ponoka the following month. And he will still be an atheist.

And yet this constant "ility of ideas," "forswearing," and so on, people imagine is conducive to reform. No sir, the only real reformer is the Right and Radical. He is the man who goes to the root of the matter and finds Progress. In the fixed, dogmatic ideal to which he sticks as he works. And that is to say the best Radical is conservative.

**Automobile Notes.**

Wilmot & Henderson report this week the sale of a special D 46 McLaughlin to F. W. Brown, and Chevrelots to D. M. Garrison and Fred Fairbairn.

H. E. Beattie has sold a Maxwell to each of the following:—Vas- sin Bros, Bow Island, and H. E. Elford and John Collins of Burdett.

Fords are still on the move. The following have purchased this week—E. Dennis of Winnifred, and D. K. Peterson, R. O. Connor and Geo. Schatz of Bow Island.

T. Ingoldsby has succeeded in obtaining the agency for the Overland car.

As most are aware, this is one of the popular cars, its sale at other points having been enormous.

The local agent informs us that already a large number of inquiries are being made, and as a result he hopes to dispose of quite a few Overlands this fall.

Reposing absolute confidence in the future of Alberta, the Ford Motor Company of Canada is shipping this week to Calgary five trainloads of cars, each train pulling 40 cars. In each car there are six Fords, and thus 1,000 new Fords will have arrived in Calgary before Saturday night.

Reform is really a better word. It means to re-shape. If a thing is in bad shape we push till we make it just that shape which we have in mind.

Where we are always making the greatest mistake, points out Chesterton, is right here. That whereas we ought, if progress means anything, to be always changing the world to suit the vision, we keep on changing the vision to fit the world. Whereas our efforts, (let us say), should be aimed at restoring honesty and faith, we gradually come to change around and around whether honesty and faith are, after all, so desirable.

Suppose, for instance, a man has the enthralling vision of a pink world. He sets to work to make it pink by all means. Let us suppose that after years of toil, rotting everything pink, he has at last reached Bow Island, and is putting the last coat (say) on the Anglican Church and then after reading a fresh philosopher, decides that after all yellow is a better ideal. You have to stick to the vision if you want to progress and not waste your time.

You can't progress if you are always changing your mind. If you are always changing your views you can be jolly well certain you will never change anything else. Certainly you will never effect any change in your environment.

A man who is an atheist one day, a Christian Scientist the next, and a Holy Roller the week after, will probably be an inmate of Ponoka the following month. And he will still be an atheist.

Those Seed Grain Liens.

A conference of representatives of the Dominion government, representatives of the provincial governments, representatives of the farmers, boards of trade, representatives of the bankers, of the loan companies, of the life insurance companies and of all business which will be held in Calgary in the very near future for the purpose of recommending legislation and action by the Dominion government to adjust the seed grain liens on farms.

Already the Dominion government, under the leadership of the Minister of the Interior, Hon. W. J. Roche, has telegraphed Secretary Campbell of the Calgary board of trade, that he will send the deputy minister, W. W. Cory, to attend the Calgary convention.

At the present time the seed grain loans have absolutely stopped loans on land of this province," said Mr. Campbell.

For the seed grain loans, which amount from ten to thirteen million dollars for Alberta, many of the farms of the province are placed under this obligation.

It takes priority to even a first mortgage and it becomes transferred from one farm to another, in case where a reversion

is made, moves and buys a farm, and remains with the first farm, a man to the owner, a detrimental purchases and an absolute hindrance to the obtaining of loans from the loan companies.

Such companies will not take farms as security in itself; and they will not risk taking other farms in the same province as security, as they never know when one of these loans may encounter it. Result: no loan by loan companies.

"That is a serious condition, isn't it. More serious by far than even most business men of our country realize. It has impressed me so seriously that we shall endeavor to get everybody working for a better adjustment. As it is the seed grain loans, like some terrible leprosy travel and spread and frighten the sensitive and fearful loan companies from the field. Something should be done; something must be done to adjust it."

Par. Sept. 7.—The French have captured the German first line trenches over the front of the salient in the Verdun front, the West Offensive is now being fought today. A breach in the German line was effected on the front northeast of Verdun, between the Vaux-Chapelle region and the town of Chonvillers. The French took 220 prisoners. The French statement attributes the powerful effort made by the German troops to dislodge the French from Hospital Farm, on the Somme front, was without success, and that the Germans were dispersed with heavy losses.

Fred Medhurst and James Begun of Ponoka have been gazetted commissioners for affidavits.

Geo. Lomas of Burdett has been appointed stock inspector.

Erikson holds a two days' fall fair on October 4th.

Two expert miners have been engaged and work will commence immediately.

However, this is a local industry, and your support is necessary if this mine is to be kept open.

Some Market Problems

Agricultural Industry the Only Large Industry That Is Unrepresented

There is a hardly old adage about "locking a garment in the closet the which has a practical application to business.

It has to do with market conditions. Canada is a not a country with a single market, but a great one that the entire continent of Europe. Her population, however, is probably not even half that of the single city of London.

Marketing in various ways, large cities have a great range of choice in the matter of what crops they are in greatest demand. The smaller cities are situated that they are within market distance of several thousand miles, and there are over a hundred thousand people. The owners can raise the crops which the market demands best, always being sure of a market for whatever they have.

Take the case in Canada. Our immense stretches of sparsely-settled territory render market transportation difficult, and are limited to but very few districts. Small fruit and vegetables, of course, are the best, but the risk is great as is also the expense. Farmers usually prefer to raise the crops which have the best qualities and a less fluctuating market value.

Marketing the best products for Canadian farmers to produce crops which will weather exportation. Wheat, oats, barley, and other cereals are the best of this class. Of course, there is a home market even for these things, but with proper management few districts in Canada are so situated as to be able to find a market for non-perishable produce.

Efficiency is the basis of modern production. Efficiency is the basis of success. Efficiency is the name with which all things are possible. Efficiency in marketing is the key to the proper distribution of farm products. Organization and co-operation among farmers has proven to be the most efficient method of distribution and one which will insure the greatest success to the greatest number of farmers. A growers' mutual marketing and purchasing association will prove a strictly co-operative basis will promote the general advancement of the producers' interests.

1. By securing better transportation which will make transportation of farm products more efficient and economical.

2. By the co-operation of farm products, which will bring up and develop new markets and secure better terms.

3. By standardizing the packing and installing uniform packages, system of market reporting which will enable the grower to know the exact market in regard to distribution and markets.

4. By the co-operative purchase of equipment, seeds, grains, fertilizers, spray materials, spray outfit, etc.

5. By the co-operative organization, the only large industry in existence that is unorganized, and as a result it is not in a position to compete with those who trade in its products.

It is very evident that fact that most farmers are better producers than he was years ago, but it is also evident that even the most advanced are not through education, applied science, government aid, better equipment, and more efficient methods, have been altogether lost because he has not been able to dispose of his products advantageously.

It is time to turn attention to production, that is, to the production of their products are sold intelligently by their own representatives. The farmer can no longer afford to let the marketing and distribution, but a marketing expert can handle the work and can afford to pay him a good sum for the increased returns that would otherwise go to the middlemen.

It is also essential to succeed in the organization of the community to carry on a co-operative business, and to be able to operate in the formation of any association of one or two, or a few products to make an organization more advantageous to a small district. It is much easier for a community to organize for small purchases or sale than it is for the individual to do so over a few communities.

It would be well to consider the fact that there is a great demand by all members of co-operative associations. This geographic specific market makes it possible for a number of farmers are all growing varieties of one sort, or apples, or berries, and can pool their product for the benefit of all.

No organization is automatic or will run itself. A co-operative organization will need a board of directors as an ordinary business can, because every man interested in the work of his association and every man thinks he knows as much about it as any other man.

From New York Harbor and its immediate approaches alone 268,000 beacons, lights to navigation are required, including 46 ships, two light vessels and 196 buoys of all classes and 37 signals, including sounding buoys.

Killed His Captor

Captured British Aviator Takes Revenge Upon German Officer

A German aviator reported the following: A young British aviator was decorated in front of the troops for his skill in flying. The aviator had been obliged to descend within the German lines. He was captured prisoner by a German officer who had fallen. The latter took him in his airplane for a flight over the allied lines in which the aviator was not allowed to be disturbed by anti-aircraft fire, as the enemy would be sure to shoot him down.

The German officer reinforced his order with a revolver, and the aviator was compelled to leave the machine and strangled himself in security.

The German officer, with his revolver at the ready, sat in the aviator's seat, and the couple than flew towards the allied lines, the aviator was compelled to descend to the right and left, according to the orders of the German. Having seen sufficient advantage in a bad season, the aviator had the machine and in order to do so the machine was destroyed in an admirable style. On reaching the allied lines, the aviator was shot down and captured, having been once insufficiently strapped in. The aviator descended as quickly as possible in the lines, where he received a welcome which took the form of a decoration.

The Double-sided Turk

Jekyll-and-Hyde Character of the Eastern Enemy

The student of race characteristics would have difficulty in finding a knottier problem than the Turk. Our Foreign Office has just commented on his warlike conduct in the garrison of the Kut. All through the sieges of the British campaign he has been a most obstinate and uncompromising fighter.

The notes that Nur-ed-Din-Pacha had been from time to time to order his men to fight to the death have disgraced Saladin in his passing.

He was a Turk, and the Turks have now taken advantage of a truce to have a look at the British forces, and to learn to apologize for the conduct of their allies, who have been led by their Arab allies, they have shown a quite remarkable consideration.

The Turk, who has been a Turk for two and one-half years, has been a five-year transplant, of from 20 to 24 inches high, from the root system. The caravans are 100 feet long and 48 inches wide, and three years old.

It is hoped that the vigorous growth of the cottonwood will prove a good basis for the latter to care for itself.

If this proves satisfactory, other situations may be found where trees can be planted in the near future.

The unusual amount of rain which has contributed very materially to the prospects of success.

The cottonwood was planted in

the fall of 1909, and has since

grown to a height of 10 feet.

How Seeds Travel

Some Have Wings. Others Attach Themselves to Moving Objects

Seeds are great travelers. They move from place to place by wind, water, or, as a natural tourist, and their means of locomotion are more varied than that of even the most modern man.

Some seeds have wings. The slightest breeze carries them far and wide, as they are carried far and wide from the parent plant.

Others attach themselves to the hair of other men and to the hair of animals. These are carried in this manner. Still others travel in the wings of birds.

The seeds of the maple are particularly well known. They are the winged variety, and when they become detached from the parent limb, a compass is used to find a place to land before a lodging place is finally found.

There are many forms and modifications of the winged seed, such as those of the maple, the hornbeam, the birch, and the chestnut. These are all common trees and specimens of the tree, the leaves, the seasons which they mature.

Some seeds also are provided with parapets or umbrellas. These are not to keep the rain off, nor do they serve as a protection, but to furnish a means of locomotion for the embryo plant. The umbrella seed, for instance, the dandelion, and, in fact, all seeds that have a downy or cottony growth are thus provided for safe journeys.

Those that attach themselves to the hair of other men and to the hair of animals are provided with hooked appendages for the purpose. An animal walks over uncultivated ground where weeds have been allowed to accumulate, and the seeds are present in the tufts of these weeds.

Other seeds have hard coats or shells which are covered in many cases with a thin skin. This skin is eaten by the birds and the seeds not being digested are thus distributed.

Many groves of cedars which dot the landscape came into existence in this manner. The seeds of the cedar trees are often in rows along fences. The fruit of the cedar is edible, but the birds do not care for it, and the grapes, and many other small fruit are scattered in this manner.

The seeds of the sun-burrowing trees are not used as food by birds or large animals, but are used, sought by small animals, and are in the habit of gathering and storing them in large quantities for winter use.

It is evident that a considerable percentage of those which are buried are never rediscovered by those birds, and when the ground is turned over, the shell is cracked open, and the warmth and moisture of the soil bring the seeds to life, and they spring into life. Thus a tree springs into existence.

It is also evident that the nuts which were buried by the squirrels did not germinate immediately after being buried, but immediately after the weather of the spring came before they put forth their tender shoots. The squirrels do not care for them, but because the hard outer walls of the shell would not admit the air inside, the nut germs, so to speak.

It was necessary that the shell be broken, so that the nut could absorb the moisture and the weather, before moisture could gain an entrance to cause the nut to germinate.

It is also evident that the nut, particularly, when taken advantage of commercially, is called "simplification." This is the name given to the nut when it is cracked open, so that it may be easily eaten.

Now, if we take the nut, for instance, to be a peach, plum, and the like, to be sterilized—flat as they may be, and then to be packed in a box, plants are to grow, or they must be packed away in boxes of sand, in a position where they will not remain frozen during the winter, in order that they may germinate in the following spring.

If seeds of this character are stored and kept dry during the winter, they will remain in a dormant state in the spring.

Seeds, with thin coats, however, like peas and beans, if treated in this manner, will be destroyed by the action of the earth, and no plant will result from sowing them in the autumn. Such seeds must, from the nature of the case, be retained in a dry and compact position during the winter, a season in order that their vitality may not be destroyed.

W. N. U. 1120

Conservation of Game

Canada Taking a Prominent Part in Protection of Wild Life

A report just issued by the Commission of Conservation, "Conservation of Game," has attracted the attention to the great value of the work done by the Canadian government in the protection of wild life.

At a conference of the Committee on Animals of Game and Fur-Bearing

Commissioners, a fund of information regarding the present condition and the necessary protection of the game birds, birds and mammals, was obtained for the international agreement for the protection of wild life. A Major and the United States is under Canadian jurisdiction.

Others are attached to the hair of other men and to the hair of animals. These are carried in this manner. Still others travel in the wings of birds.

The seeds of the maple are particularly well known. They are the winged variety, and when they become detached from the parent limb, a compass is used to find a place to land before a lodging place is finally found.

There are many forms and modifications of the winged seed, such as those of the maple, the hornbeam, the birch, and the chestnut. These are all common trees and specimens of the tree, the leaves, the seasons which they mature.

Some seeds also are provided with parapets or umbrellas. These are not to keep the rain off, nor do they serve as a protection, but to furnish a means of locomotion for the embryo plant. The umbrella seed, for instance, the dandelion, and, in fact, all seeds that have a downy or cottony growth are thus provided for safe journeys.

Those that attach themselves to the hair of other men and to the hair of animals are provided with hooked appendages for the purpose. An animal walks over uncultivated ground where weeds have been allowed to accumulate, and the seeds are present in the tufts of these weeds.

Other seeds have hard coats or shells which are covered, in many cases, with a thin skin. This skin is eaten by the birds and the seeds not being digested are thus distributed.

Many groves of cedars which dot the landscape came into existence in this manner. The seeds of the cedar trees are often in rows along fences. The fruit of the cedar is edible, but the birds do not care for it, and the grapes, and many other small fruit are scattered in this manner.

The seeds of the sun-burrowing trees are not used as food by birds or large animals, but are used, sought by small animals, and are in the habit of gathering and storing them in large quantities for winter use.

It is evident that a considerable percentage of those which are buried are never rediscovered by those birds, and when the ground is turned over, the shell is cracked open, and the warmth and moisture of the soil bring the seeds to life, and they spring into life. How Japan Helped

Japan Wins Guadal B.C. Coast in Early Days of War

Commander Denzo Mori, of the imperial Japanese navy, in an interview with the reporter, said that the result of the war, "The commander went through the Russo-Japanese War, and I am in doubt in the result of the war."

There was no doubt in the mind of Commander Mori that the Japanese had achieved a great success in the war, and, despite the fact that the Germans have not exacted any information on the matter, he said, that the result was a victory for Japan.

Speaking of the early days of the war, Commander Mori said that the Japanese forces did much work in the hills, and, in fact, had the full story in guarding the coast of British Columbia, and the Australian ships were still large.

Much of the information now being given by the Japanese was produced by the Japanese in the early days of the war, when the Japanese were still in the hills, and, in fact, had the full story in guarding the coast of British Columbia, and the Australian ships were still large.

The English, however, suggested that the Japanese could fight, and he said, "Yes, they were in the engagements."

Speaking of the early days of the war, Commander Mori said that the Japanese forces did much work in the hills, and, in fact, had the full story in guarding the coast of British Columbia, and the Australian ships were still large.

Warts are disfigurements that displease the eye, and are treated with Holloman's Corn Cure.

France Will Have Something to Say

Speculative construction of post bellum maps of Europe was a diversionary game during the first year of the war, but it was in the war's second year.

It was purely a diversionary game, and when it is entirely closed, it is sure to be as much as now.

At all events, it is a safe wager that the English will be the first to break the deadlock.

The English, however, are a great

symbol of Britain and Canada in this war," he added. "We all feel that we will be the first to break the deadlock."

The English, however, are a great

symbol of Britain and Canada in this war," he added. "We all feel that we will be the first to break the deadlock."

W. J. OLIVER, proprietor.

"The Review" for up-to-date printing.

Local & General

Four carloads of Fords are expected to arrive here shortly.

Mrs. B. T. Whitney returned on Friday from a visit to Banff.

Mr. and Mrs. R. H. Robertson left for Medicine Hat on Thursday.

A. F. Dulmage was a business visitor to Lethbridge on Thursday.

Miss Spence, of the "phone central," spent Labor Day at Medicine Hat.

I have still a little binder twine on hand. Price is right. —S. G. Jamieson.

Miss Sinclair arrived from New Brunswick on Monday to take charge of the school at Courtland Hill.

L. D. Brower arrived on Wednesday night from Michigan to superintend the harvesting of his crop.

Birth—At Burdett, Alberta, on Sunday, September 3rd, to Mr. and Mrs. B. Aarig, a daughter.

Many will be pleased to hear that Mrs. J. R. Agar, who has been ill for several weeks past, is now much improved.

Mrs. J. Henderson, who has been visiting her mother, Mrs. F. J. Henderson, returned to Lethbridge on Tuesday.

Mrs. M. P. Tolan, who has been visiting friends here, left on Saturday for various points along the Crow's Nest.

The bull insurance companies report that the Bow Island district received this year the least damage of any in Alberta.

Geo. Evans and August Flamm have each purchased this week from S. G. Jamieson a complete 10-20 Titan tractor outfit.

Mr. and Mrs. J. D. Smith of North Battleford, Sask., spent a few days in town last week the guests of Mr. and Mrs. J. R. Agar.

Mrs. M. A. Hardie and children of Bow Island, have arrived in the city to spend the winter and are living in the Victoria Mansions.—Lethbridge Herald.

Steve Halpin, who is now stationed at Travers, Alberta, spent a few days here last week with his parents, leaving on Tuesday to spend his vacation in Minneapolis and various other points down south.

Mrs. Cochran and daughter Treva, who have been visiting friends in the east, returned home on Saturday, and resumed the management of the restaurant on Bell Street. Mr. Cochran will remain in the east for a time.

The tremendous increase in paper, as well as the extra cost of printing material, is responsible for the suppression of a large number of newspapers. Two of the latest to go under are the Grassy Lake Gazette and the Burdett Enterprise.

Mrs. Harvey Elford, who has been an inmate of the hospital in Bow Island since Monday last, suffering from a broken astral bone, returned to her home at Burdett yesterday (Thursday). We understand she sustained the injury in being thrown from a horse on Friday of last week.

The trench for the gas pipe line, which has been excavated south of the track for the purpose of connecting up the elevators, is now finished, and it only awaits the sanction of the C.P.R. for permission to run the pipe under the tracks, and the ball line will then be complete.

The Alberta Branch of the Women's Institute will meet with Mrs. Fred Taylor on September 10th at 8 p.m. All members are asked to be present.

No Rust Here.

Special Terms to Threshing Outfits.

HOAGLIN'S DEPARTMENT STORE

OF INTEREST TO HOMESTEADERS.

The department of the interior have decided to extend protection during the harvesting season to all homesteaders who may apply for leave to engage in such operations. This does not, however, include the holders of undivided, proxy homesteads.

Entomists are to apply to the department direct or through the agent for district in which the land is situated, for this permission.

Absence from the homestead while engaged in harvesting operations cannot be allowed to count as residence duties.

WHO WOULDN'T BE A FARMER?

Winnipeg, Sept. 4. For a car of what bought Thursday the Grain Growers Grain Co. paid \$2,708.50. It was announced today. This is a record. A few years ago a farmer got \$1,000 for a car it was the talk of the countryside.

This year, many cars have been bought for more than \$2,000 and gradually the amount has been creeping up. The car bought by the Grain Growers Grain Co. came from Travers Alberta. It carried 1,920 bushels and 10 pounds, graded No. 1 Northern and brought \$1,50 a bushel.
